

Specialist fertility care from a team you know and trust

Based in the heart of Box Hill's medical precinct, Newlife IVF offers comprehensive fertility care - from fertility testing through to IVF - in a thoughtfully designed environment purpose-built to support the latest scientific techniques and patient-centred care.

Your independent IVF provider

Newlife IVF is fully owned and operated by a group of leading Victorian fertility specialists. As one of only a few independent IVF providers in Victoria, we pride ourselves on providing the very highest standards of fertility care and support. We have designed every aspect of our practice with our patients' needs in mind, with the aim of delivering a truly caring and well-supported experience as they journey with us to conception.

All-new, state-of-the-art treatment centre

Our purpose-built fertility centre in Box Hill enables patients to undergo all their investigations and treatment in the one place. Co-located services include a fully accredited, state-of-the-art laboratory, day surgery (operated by Epworth Eastern), specialist nursing and counselling services, medication dispensing, ultrasound, pathology, and a WHO Level 5 semen analysis facility. For the convenience of our patients, our fertility specialists will continue to consult at all their usual locations. We have also teamed up with leading providers in pathology and radiology, so patients can have their investigations performed closer to home, if preferred.

Caring
Experienced
Specialists

A comprehensive range of fertility services

We provide tailored fertility care for individuals, heterosexual and same-sex couples, wherever they are on their journey to parenthood:

Fertility testing for males and females

- WHO Level 5 semen analysis, the highest level of semen analysis currently available in Victoria
- Testicular biopsy
- Hormonal testing, imaging studies, surgical diagnostic procedures

Early fertility treatment

- Fertility optimisation
- Ovulation induction
- Ovulation tracking
- Intra-uterine insemination

IVF

- Standard IVF
- IVF plus ICSI
- IVF plus IMSI
- Second opinion for IVF veterans

Genetic testing of embryos

- Pre-implantation genetic testing (PGT)
- Non-invasive chromosomal screening (NICS)

Fertility preservation

- Egg, sperm, embryo and ovarian tissue freezing (medical and elective)

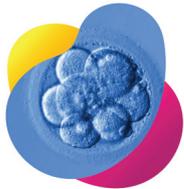

Donor and surrogacy support

Giving new life in a different way

Best scientific practice supporting a higher standard of care

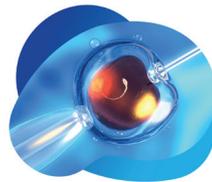

Our standard IVF process incorporates advanced scientific tools and techniques that other IVF providers do not offer or only offer for an additional cost. We choose to offer these as standard practice – not just as optional extras for those that can afford to pay more – because we believe they represent current best practice in IVF and offer our patients the best possible chance of success.

At present, this includes the use of the EmbryoScope time-lapse system, sequential media and EmbryoGlue to aid the development, selection and transfer of embryos during IVF, as well as oocyte spindle observation for intracytoplasmic sperm injection (ICSI). We do not think of these techniques as 'add-ons' but as our standard of care. As such, they are included in our normal cycle fees and **do not** incur additional costs.

EMBRYOSCOPE

An incubator that facilitates undisturbed embryo growth and continual embryo assessment.

EGG SPINDLE VISUALISATION

A microscopic imaging system to assess if an egg is in optimal condition for fertilisation via ICSI.

EMBRYOGLUE

A nutrient-rich substance designed to promote successful embryo transfer.

Affordable IVF supporting equitable access

Newlife IVF is committed to affordable IVF, in line with our belief that IVF should be reasonably priced and accessible to all.

Our treatment cycle fees cover all parts of the IVF treatment cycle, including:

- Access to our dedicated team of professionals – both clinical and non-clinical – to assist and support patients throughout their entire treatment course
- Extensive education on the treatment process and how to administer any medications required during the course of the cycle by Newlife's specialist nursing team
- All mandatory counselling (with a professional IVF counsellor)
- All blood tests and ultrasound scans requested throughout the treatment cycle
- All laboratory and scientific work
- Access to advanced scientific techniques, including the EmbryoScope time-lapse system, sequential media and EmbryoGlue, as well as egg spindle visualisation for ICSI
- Egg collection and embryo transfer procedures performed by a Newlife IVF specialist
- Vitricification of embryos and first 6 months' storage
- Phone calls from our embryologists to update patients on the status of their eggs and embryos
- The assistance of our patient support team to ensure patients meet the requirements for IVF treatment and any rebates they are entitled to from Medicare.

Fertility service	Estimated out-of-pocket costs (once Medicare rebate applied)*
Standard IVF cycle (first cycle)	\$4,994.65
Standard IVF cycle (subsequent cycle or thereafter)	\$4,296.70
IVF + ICSI (first cycle) with egg spindle visualisation	\$5,499.60
IVF + ICSI (subsequent cycle within the same calendar year) with egg spindle visualisation	\$4801.65
Frozen embryo transfer cycle	\$1,832.40
Pre-implantation genetic test (PGT)	\$780.00 per embryo*
Medical egg freezing (first cycle)	\$4,068.65
Medical egg freezing subsequent cycle within the same calendar year)	\$3,370.70
Elective egg freezing (no Medicare rebate)	\$4670.00
Ongoing storage of frozen eggs, sperm or embryos	\$280 per 6 months

*Fees correct as of 1 January 2025; reduced rates may apply for PGT-M and -SR depending on eligibility (in line with new Medicare rebates effective 1 November 2021), as well as number of embryos tested. For PGT pricing specific to your circumstances, please contact us.

Caring, experienced specialists

Our doctors have decades of experience in delivering fertility care and IVF services. As individuals, they operate successful private practices, consult at some of Melbourne's most prestigious hospitals, hold University teaching positions and contribute to advances in care through original research and related activities.

With a well-established track record in delivering fertility and IVF treatments via other IVF providers, they offer experienced specialist care for individuals and couples needing help to conceive.

The Newlife values. A new approach.

Because we are a clinician-owned and led clinic, our specialists navigate the fertility journey alongside our patients. This clinical empathy lies at the heart of Newlife IVF – we put patients first, not profits. Along with our collective experience and expertise, patients can expect an exceptional level of personalised care, tailored to their specific circumstances, preferences and lifestyle, as well as genuine support and kindness at every step along the way.

WE ACT WITH INTEGRITY

We treat everyone with respect and dignity. We're thoughtful and considerate. We have a strong ethical conscience, so our first priority is to do right by our patients and those who entrust their care to us.

WE OFFER A HIGHER STANDARD OF CARE

We are committed to providing equitable access to advanced scientific tools and techniques. We offer best scientific practice as standard – not just to those who can afford to pay extra.

WE COMPLETE THE CYCLE

We pay close attention at every step of the treatment cycle, and make careful decisions about how our patients' life-giving assets are cared for and treated in the laboratory setting. Our systems and processes mean we are well-placed to identify why a cycle was or was not successful, and to use this knowledge to inform future care.

WE PROVIDE A SOURCE OF HOPE

We are committed to enabling our patients' success throughout their journey with us. We do not give false hope, but we are dedicated to providing our patients with options that provide the best chance of conception for them.

WE ALLOW WHAT'S UNIQUE ABOUT OUR PATIENTS TO GUIDE US

Everyone is different and our fertility care reflects this. What is right for one person or couple may not be for another. We take the time to truly understand our patients' circumstances from every angle – physiological, lifestyle, social and emotional – and to offer care and options tailored to them.
